Indicative demo report only. Synthetic portfolio data — not an official bank or government credit decision. Confirm scheme details and subsidy amounts at your bank or CSC.

Farmer summary

Name / ID	Harpreet Singh
State	PB
District	PB-Malwa
Crop	Wheat
Season	Rabi
Land (ha)	3.5
Soil	Alluvial
Rainfall (mm)	650
Irrigation	Canal
Loan (₹)	120000
Annual income (₹)	420000
Existing debt (₹)	40000

Risk assessment

Risk level	Low
Risk score	0.05 (5/100)

What drove this score (SHAP)

Factor	Impact	Explanation
Annual farm income	-26 pts	Farm income provides a stronger buffer for repayment
Land size (ha)	-4 pts	Land size supported a more comfortable loan profile
Repayment history	-4 pts	Stronger repayment history lowered risk
District	-3 pts	Local district conditions were slightly protective
Rainfall (mm)	+2 pts	Rainfall conditions in your area raised repayment risk

Advisory

Namaste Harpreet Singh. Your FarmCredit risk level is Low. Main pressure points: Rainfall conditions in your area raised repayment risk. What is helping: Farm income provides a stronger buffer for repayment; Land size supported a more comfortable loan profile. Next steps: match crop and irrigation to local rainfall, keep loan size close to expected income, and ask your bank/CSC about KCC, PM-KISAN, and PMFBY eligibility. Figures here are indicative for this demo — confirm locally.

Scheme checks (indicative)

- PM-KISAN — income support for eligible landholding farmers (verify eligibility locally).

- Kisan Credit Card (KCC) — working-capital credit for crop and farm needs.
- PMFBY — crop insurance against weather and yield shocks (check crop/season coverage).
